

Session E23 – Security Development Lifecycle Applications and Infrastructure

About the Speaker

Himanshu Dwivedi

Himanshu Dwivedi, from @stake, a digital security consulting services and products firm, has 5 years experience in information technology consulting. His professional experience includes application programming and security consultancy, with an emphasis on secure network architecture, storage area networks (SANs), and host assessment of Windows and UNIX platforms. At @stake, he forms part of the San Francisco based PSO providing clients with Attack & Penetration services, secure server analysis, fibre channel security, and network architecture reviews. Himanshu also has experience as a security instructor, where he has taught courses about Windows 2000 Security. Sample engagements include security architecture design of on-line product companies, systems and network architecture reviews of e-commerce ASPs/ISPs, and architectural design of a SAN.
