

Session S33 – An Introduction to Security Event Management

About the Speaker

Matthew Klunder

Matthew Klunder has been employed in the information security field for over six years. His initial work was with Price Waterhouse and its Enterprise Security Services team, later to become Technology Risk Services when PricewaterhouseCoopers came about. In his capacity as a Senior Consultant, Matthew conducted and led numerous threat and vulnerability assessments on a wide range of client networks. In addition, he performed security control assessments on Win32, Unix, Cisco, and Oracle installations. His work also entailed participating in firewall and VPN implementations.

Since November 2000, Matthew has been involved in information security at Charles Schwab & Co. During his time, he has implemented host and network-based intrusion detection systems and applications throughout the environment, utilizing a combination of commercial and custom-developed programs. As part of the incidence response team, Matthew took a role in security investigations, working with Human Resources and Risk Management departments. Matthew has also written or contributed to policies, procedures, and standards governing Windows security, incident response, and production access guidelines.
