

Session S11 – Audit Risks and Issues for Radio Frequency Identification

By Lionel Yee and Sagi Leizerov

Topic Summary

This presentation will discuss the benefits, application and obstacles in the implementation of the Radio Frequency Identification (RFID) technology in the current business environment. This will include the impact of this technology on IT auditing and will cover some of the risks and issues related to RFID, such as privacy concerns, return on investment, and implementation risks. We will also include some discussion of the current trends in the RFID technology and potential future applications as the technology matures.
