

## **Session S31 – Personal and Corporate Identity Theft**

*By Chris Pick*

### Topic Summary

Today's thieves have many tools and techniques at their fingertips to steal your personal and corporate identity. These techniques range from persistent theft of physically identifiable information, to more sophisticated forms of technical and social engineering attacks which all leverage elements of your identity to mask other more serious crimes.

In this presentation Chris Pick, a leading security expert with years of experience in ethical hacking, will provide actual scenarios and examples of how identity theft is performed and how you can safeguard your personal and corporate information. Topics include: how to determine if you're a target; the cost and consequences are of losing your identity; today's methods and practical examples exploring elicitation, social engineering and phishing; and what steps you can take to safeguard your personal and corporate identity.
