

Session S33 – An Introduction to Security Event Management

By Matthew Klunder

Topic Summary

The purpose of this presentation will be to familiarize the participants with key concepts of security event management, including the purpose for such an architecture, the various technologies that can link to it, the benefits and potential pitfalls, and ways to audit and measure the effectiveness of a SEM architecture. The participant should also come away from the presentation with an understanding of how a security event management system can effectively tie into and enhance an existing security framework.
