

Risk: Security's New Compliance

Torsten George
Vice President Marketing and Products, Agilience Inc.

Professional Strategies – S23

Session Abstract

In today's high regulated IT environment, many companies are required to comply with multiple industry and government mandates that govern IT security. As we have seen on countless occasions, being in compliance does not equal being secure. This session will examine the relationship between IT security, risk management, and regulatory compliance. Specifically the presenter will discuss the roles of risk management and compliance for providing improved security, and the benefits of shifting from a compliance-driven to risk-based approach. The presenter will use case studies to illustrate best practices in achieving continuous compliance and situational awareness, leading to increased operational efficiency and better decision making processes.

Target Audience

For any attendee that wants to learn how to tackle risk and its associated controls by business unit and how to automate these efforts; intended for both senior management and technical audience.
