

Insider Threat: Controlling the Wild Fires

Lisa Oglesby
CEO and Founder
Information Security Advisors

Cyber Security In-Depth Seminar – D23

Session Abstract

It is estimated that more than 75% of organizational data breaches are caused by trusted insiders whether intentional (malicious) or unintentional. This trend shows no signs of slowing as IT professionals everywhere struggle with the onslaught of new technologies and BYOD demands. Traditional methods for securing data on devices and at the perimeter are no longer sufficient. To effectively secure data in today's environment, organizations require an integrated data security strategy that incorporates technical, behavioral and organizational factors into their information protection program in order to mitigate risks.

In this interactive workshop, we will discuss insider threat risk trends, explore information protection technologies and share best practice strategies for developing and implementing comprehensive data protection programs.

Target Audience

Anyone who is involved with protecting their organization's information.

Speaker Bio

Lisa Oglesby, founder ISA, helps organizations build comprehensive insider threat information security programs. Over the past twenty years she has worked with a wide variety of organizations in a multitude of industries, including financial services, insurance, manufacturing, travel, health, non-profit and government.

Prior to founding Information Security Advisors, Lisa served as the Data Loss Prevention Practice Leader at Symantec where she was responsible for developing data loss prevention (DLP) programs for major corporations to support their insider threat security initiatives.

Lisa is recognized for her outstanding customer focus, industry knowledge and ability to align the critical connections between IT and business that are imperative to successful program implementations. She is also a highly trained facilitator who has developed and delivered workshops on business process, change management, insider threat data security, project management and IT implementation methodology. She has earned her CISM, PMP, CCM and ITIL certifications.
