

## Security Analytics – The Game is On

**Andrew Plato**  
 President / CEO, Anitian

Professional Techniques – T22

### Session Abstract

If Sherlock Holmes was around today, he would likely be drawn into the world of hackers, breaches, and malware. Since most of us lack the genius of the great “consulting detective” we must rely on technology to close the gap. Security Analytics is a new class of technologies designed to empower security teams with robust threat intelligence to help detect and respond to attacks. However, Security Analytics is a very new market with a very diverse collection of players. In this presentation, we will discuss the emergence and growth of the Security Analytics market. We will also discuss how this technology can help protect against new threats, as well as the challenges to adopting Security Analytics technologies.

### Target Audience

- Information security officers (ISO)
- IT managers and directors
- Security engineers and analysts

### Speaker Bio

Andrew Plato is a veteran author, speaker and thought leader in the IT security industry. He is also the founder and chief executive of the Anitian, the oldest security intelligence firm in the nation. In 1995 while working at Microsoft, Andrew executed the first known incident of a SQL injection attack against an early e-commerce website. This event inspired Andrew to found Anitian to help organizations and IT leaders navigate the complexities of information security.
