

Managing Risk in Tomorrow's Heterogeneous Environment

Scott Lowry, Sr. Director, AppDynamics

Professional Strategies – S13

Trust in, and value from, information systems

San Francisco Chapter

The CyberSizelT logo is set against a background illustration of the San Francisco skyline, including the Golden Gate Bridge and various skyscrapers. The word "CyberSizelT" is written in a large, stylized font where the letters are interconnected. The "C" and "S" are significantly larger than the other letters. The text is colored in a gradient from dark red to light red, with a white outline.

2015 Fall Conference – “CyberSizeIT”
November 9 – 11, 2015

Takeaways

- Technology is changing in ways that aren't initially apparent
- These changes will require a different approach to IA than that of our slower-growing ancestors
- In order to meet the needs of Senior Management, Internal Audit must *evolve*

A photograph of a massive glacier wall meeting the ocean. The glacier is a deep blue color, with visible crevasses and layers of ice. In the background, snow-capped mountains rise against a clear blue sky. The water in the foreground is dark blue, with several small icebergs floating on the surface.

The only thing that is constant
is *Change*

Old School

(Your Father's Company)

- Juggernauts of yesterday
 - Oil, Autos, Banks, Insurance

Old School

(2015)

- Today' Giants
– Familiar?

Old School

(Looking a little further under the covers)

What does IT look like in today's companies?

- IT Budgets growing by 3.3%
- Share of IT Projects dedicated to customer facing interface is growing from 15-17%
- Cloud Investment is increasing
 - (91% of companies used cloud solution)
- 22% growth in software developers

What's Happening?

Old School

(Looking a little further under the covers)

- Software-enabled companies are becoming “software-defined” companies

Old School

(Looking a little further under the covers)

- IT Budgets growing by 3.3%
- Share of IT Projects dedicated to customer facing interface is growing from 15-17%
- Cloud Investment is increasing
 - (91% of companies used cloud solution)
- 22% growth in software developers

Commercial flight with no pilot.

Delivery drone carries on-demand medicine to a remote island in the North Sea.

Drones inspect the blades on massive wind turbines (often taller than the Statue of Liberty).

Moral dilemma: If a child runs in front of this self-driving car, will it react differently than if the obstacle were an adult — or perhaps an animal — in a scenario in which the car must choose between the safety of its passenger or the preservation of another life?

Farmer controls her driverless tractor from a remote control station. A drone overhead has sensors that measure soil conditions.

Passenger writes a report during his morning commute (in a self-driving car he summoned on his smartphone).

This self-driving car does not need collision insurance. Instead, it has insurance against cybersecurity breaches.

What the experts say...

- All industries in all geographies are undergoing radical digital disruption
- Gartner
- Businesses must think and act differently to succeed in this new environment
- Accenture
- CIOs must enhance customer engagement with continuous business services
- Forrester

Emergence of the Software-Defined Business

An enterprise or organization whose fundamental value proposition is defined, enabled or delivered through software.

How do we assess risk in this?

Closer to the Business

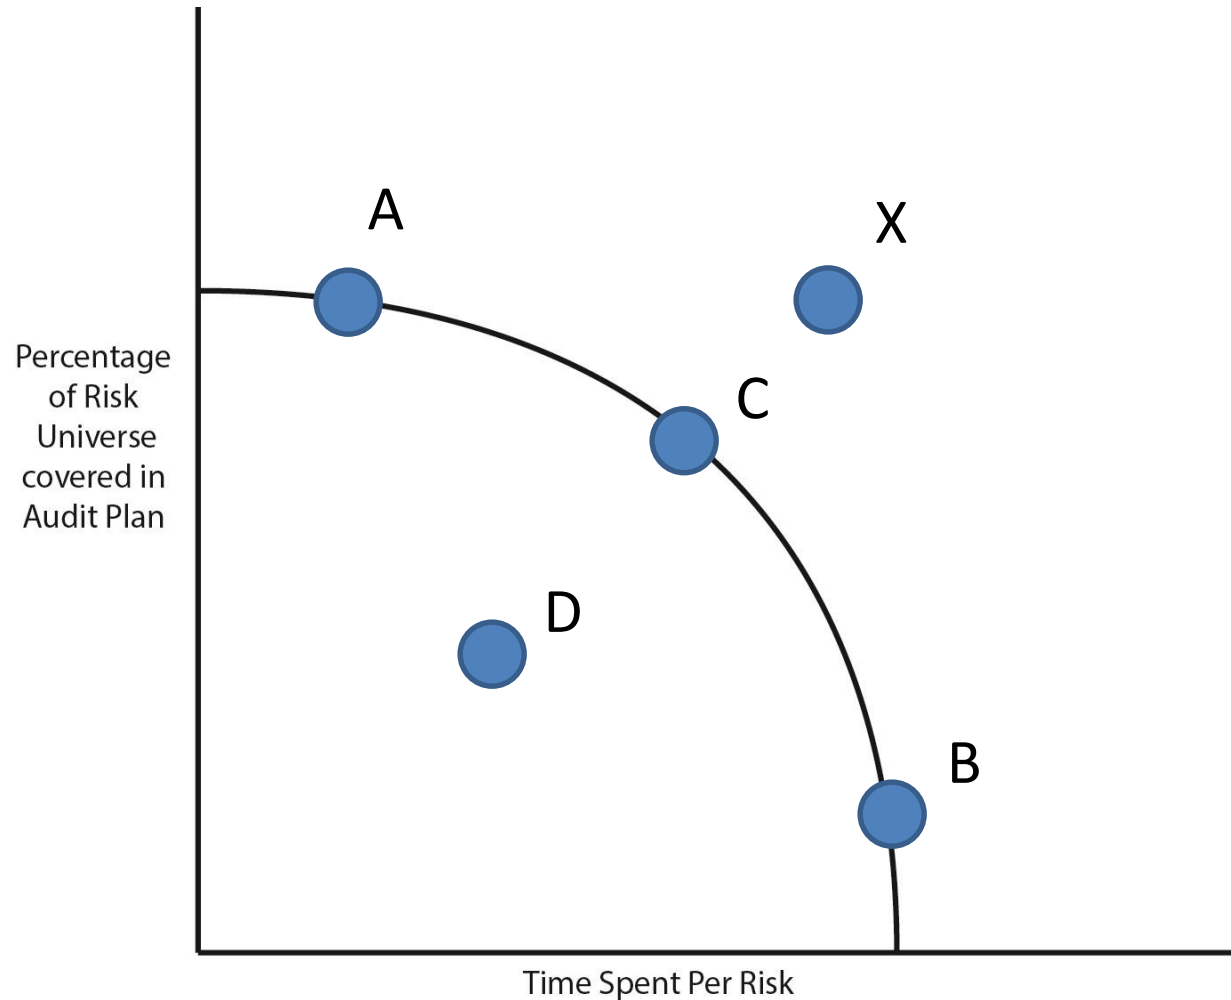

- The lines between IT and the business are blurring
 - SaaS has pushed this front and center
 - Business has a green light to run to the cloud
- Lines between Operational Audit and IT audit are blurring
 - Must understand business objectives

Closer to the Business

(what does it mean to us?)

- Embrace the role as Trusted Advisor
 - Provide the transparency the business needs to make informed decisions
- We can't look in the rearview mirror
 - To provide value, have to know where the business is going
- Push the audit curve up and right
 - Move assurance functions to the business

The Audit Trade-off

Push Risk Assurance to the Business

Touch what matters

- Address meaningful metrics
- Understand how your business is moving from back office to customer-facing
- How is the business connecting data
- What does it look like to the customer
- Different times require different questions

Focus on the Future

- How is the risk changing?
 - Don't look for today's gaps, instead understand how they are changing
- Focus on the areas that that create the greatest risk for tomorrow
 - Look for the root cause
 - Provide visibility and solutions
 - Look in areas where management isn't

Conclusion

- The software-defined business is here
- It's more complex and fast-moving
- The role that IA will play is also changing
- Internal Auditors must evolve to play a role

Discussion
