#### **Session Synopsis**

The big picture of the BS25999 Standard reflects the international recommended practices for Business Continuity Management, to deliver guidance for how to assess needs, build and test plans and continually enhance a Business Continuity program.

The BS25999 standard introduces a system for establishing, managing and improving a continuity program. Recognizing the advantages of deploying a business continuity management system across an enterprise, the BS25999 standard is an example of how standards help address many of the challenges associated with developing, adopting and ultimately continuously improving an enterprise's continuity program. Standards will help define and build the infrastructure required to support the continuous growth and maturity of a business continuity management system and the program it supports, regardless of the size of the organization or the industry the organization operates in.

In addition, the session will identify other standards addressing the BC disciplines, followed by a general Q&A session relating to business continuity, continuity planning, and planning considerations in relation to a major disaster, such as Hurricane Ike.

#### **Speaker Biography**

Lee Milligan has more than 20 years experience in the DR/BCP field, and more than 50 years of business and technology experience.

He has developed and implemented BCP programs covering all business areas including IT recovery, corporate management, office and process recovery, crisis management, and continuity of operations for distribution and sourcing. Mr. Milligan has served as Chairman of a large community based organization in his home state of California and as Chair of the Strohl International User Group, and has spoken concerning BCP at a large number of organizations and conferences.
